Impact Analysis Structure
Global Health and Pandemic Prevention Centres

Input

- Input from the DAAD (e.g., staff and material expenditure covered by the grants and expenditure for funded individuals)
- Input from the higher education institutions (grant recipients; e.g., own funds, scientific expertise, infrastructure, and permanent staff)
- Input from third parties (e.g., third-party funds, scientific expertise, infrastructure)

Measures/activities

- Teaching modules, master's degrees and doctoral programmes are newly developed/updated.
- Scholarships for students and researchers are granted, as well as university places and doctorate opportunities.
- Scholarships are granted to fund research projects.
- A visiting professorship and/or short-term lectureships are established.
- Events and training measures are arranged.
- Alumni activities are arranged.

Output (results, services, changes)

- Study opportunities (modules, courses of study) based on the latest state of scientific knowledge have been developed/updated.
- Students/doctoral candidates/lecturers have spent (sponsored) study and research stays in an international environment.
- Application and demand oriented research is taking place, regarding the prevention and treatment of infectious diseases, pandemic prevention or the corresponding health care systems.
- The Centres maintain links to stakeholders from the areas of science, politics, business, and to civil society.

Outcome (programme and project objectives, immediate short and long-term effects)

- The Centres provide study and doctorate opportunities in relevant disciplines.
- The Centres' graduates are qualified for the local and international employment market in the area of global health care and pandemic prevention.
- There are established research capacities in the area of global health care and pandemic prevention.
- New scientific findings are transferred into practice.

Impact (longer-term effects)

- The programme contributes to improving the quality and relevance of education and research at the higher education institutions involved.
- The programme contributes to knowledge generation, transfer and circulation in matters of global health and pandemic prevention.
- The programme promotes closer partnership-based cooperation among higher education institutions, research facilities and public and civic stakeholders from the area of health care.
- New scientific findings are transferred into practice.

- In line with Foreign Cultural and Educational Policy, the programme contributes to finding new friends and partners for Germany and to making links with Germany stronger.
